DETAILED ACTION***Allowable Subject Matter***

1. **Claims 1-6 are allowed.**
2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-6, claim 1 teaches a clipping dock for network video cameras comprising **a primary clip rod having a base disk** which has a pair of first clip arms, a shaft extending from the center, and a guiding rib around the shaft, the first clip arm having one end attached to a first clip strut; **a secondary clip rod having a coupling ring stacked on the base disk to couple on the guiding rib** and a pair of second clip arms which have respectively one end attached to a second clip strut, **the coupling ring having ratchet teeth** formed on the peripheral surface thereof; **a torsional spring** coupled on the shaft at the stacked location between the secondary clip rod and the primary clip rod to allow the primary clip rod and the secondary clip rod to extend or fold elastically relative to each other; and **an actuating button** located on the primary clip rod to selectively engage with the ratchet teeth to allow the primary clip rod and the secondary clip rod to extend or fold at a selected angle.

It is noted that the closest prior art, i.e. Hong (US 6,663,066 B1), Surabian (US D411,220), and Krekelberg (US 5,855,343), show similar camera supports having arms pivotally connected to a main body, including a resilient element for gripping to a surface. However, Hong, Surabian and Krekelberg fail to disclose that the clipping mechanism includes a coupling ring having ratchet teeth to

couple on the guiding rib of the base disk with an actuating button to selectively engage with the teeth so as to extend or fold the clip arms, which are biased by the torsional spring.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
